

BOOK REVIEW

Handbook of Essential Oils Science Technology and Applications

Edited by K. Hüsnü Can Başer and Gerard Buchbauer (2010)

Publisher CRC Press. Taylor & Francis Group

International Standard Book Number: 978-1-4200-6315-8 (Hardback)

ISBN: 142 00 63154 English. 975 pp with 5 Annexes.

*Edited by two renowned experts with 31 contributors under 21 chapters. Each chapter of authoritative experts explores the historical, biologically, regulatory and microbial aspects. One of the most interesting books for essential oil, the book include the extensive bibliographical references that accompany each chapter and highly useful index. One lack is its shortage of illustrations and photos. This subject demands more extensive images of the various species. This is an essential references however and one that reader will return to time and again. Any one does any type of research involving essential oils and aromatic plants will find work an excellent book.

I highly recommend it as an addition to the libraries who work with aromatic plants and essential oils.
